SUBJECT INDEX VOLUME 29 1999

α-ketoglutarate, 355
abiogenesis, 375
abiotic synthesis, 167
acetate, 361
accumulation principle, 615
activated nucleotide, 473, 563
ADP, 511
alanine, 273, 355
aldol, 139
alkanones, 153, 167
alkylbenzenes, 167
alkylphenols, 167
alumina, 451
amidotriphosphate, 333
amino acid 5, 123, 451
ammonia, 33, 287, 355
Antarctica, 187
apatite, 555
ATP, 361, 511
asteroid, 521
autocatalysis, 249
autocatalytic amplification, 317

biochemical, 95
biopolymer, 297

calcium phosphate, 511
carbonyldiimidazole, 441
carboxylic acid, 187, 489
catalysis, 115, 451, 463
chemo-autotrophic, 5
chiral amplification, 615
chirality, 215, 317, 615
chondrite, 187
circularly polarized light, 329
clay, 297, 451, 563
clay synthesis, 273
coalite, 139
CO_2, 5, 59
code, 425
codon, 203
codon-amino acid, 95
comet, 521
contamination, 521
COS, 5
crust, 47
crystallization, 615
CS_2, 5
Cu^{2+}, 463
cyanate, 511
cyclotriphosphate, 333
cysteine, 441

degradation, 261
deoxyribonucleotide, 593
dicarboxylic acid, 489
direct evolution, 425
disulfide, 441
DNA, 425
double layer hydroxide, 139

Earth, 123
electric discharge, 555
ethanolamine, 287
evolution, 95, 203, 463
exobiology, 47

Fe^{2+}, 33
FeS-H_2S/FeS_2, 5
Fischer-Tropsch, 153, 167
flow reactor, 249
formate, 355
formic acid, 153

genetic, 297

genetic code, 95, 203
Glindemann, 555
glutamic acid, 115
glutamate, 355
glyceraldehyde phosphate, 139
glycine, 249, 273
glycolaldehyde, 287, 333
glycolaldehyde phosphate, 139, 333

habitability, 405
handedness, 329
homochirality, 615
hydrolysis, 229, 361
hydrotalcite, 139
hydrothermal, 5, 33, 153, 249, 361
hydroxylapatite, 115, 229
hypercycle, 95

impacts, 123
internucleotide link, 473
interstellar grain, 215
in vitro selection, 375, 391
iron oxalate, 167
isotopes, 47

labeled release, 625
L-amino acid, 215
leucine, 463
L-γ-carboxyglutamic acid, 115
life, 405, 521, 625
ligation, 375
lightning, 555
lipid, 153
lysine, 463

magnesium oxide, 489
mangalite, 139
Mars, 47, 59, 521, 625
metabolism, 287
meteorite, 187, 215
Mg^{2+}, 115
mineral, 297
mineral catalysis, 361
mineral surface, 597
molecular machine, 203
molecular modeling, 597
molecular scaffold, 441
molybdenum disulfide, 597
monolayer, 597
mononucleotide, 261
montmorillonite, 563
Murchison, 215

n-alkanes, 153, 167
n-alkanol, 153, 167
n-alkanoic acid, 153, 167
n-alkene, 153, 167
nitrite, 33
nucleic acid, 297, 425
nucleophilicity, 473
nucleotide dimer, 473
nucleotide phosphate, 229

oligomerization, 593
oligonucleotide, 563
oligopeptide, 375
organic acid, 5
organics, 59, 489
origin of homochirality, 215

peptide formation, 441
peptides, 115, 123, 249, 273, 391, 451
peroxide, 59
phosphorous acid, 555
phosphorimidazolide, 473
phosphorylation, 229, 333, 511
photolysis, 33, 261
planet, 405
polymerization, 615
prebiotic, 229
protein, 95, 391
pulsar, 329
purine nucleotide, 563
pyridine, 287
pyridoxal, 287
pyrimidine nucleotide, 563
pyrite, 5, 361
pyrophosphate, 261
pyrrhotite, 5

racemization, 215, 317
rate constant, 563

reduction, 5, 33
red dwarf star, 405
resolution, 317
ribose-2, 4-diphosphate, 333
RNA, 391
RNA sugar phosphate, 139
RNA world, 375, 563

salt-induced, 273, 463
scanning tunneling microscopy, 597
silica, 451
soil oxidants, 59
sterilization, 521
stichtite, 139
super novae, 329
Sydney Fox, 1

template-directed, 375, 593
titanium dioxide, 59
transphosphorylation, 361
trimetaphosphate, 333
tri-*o*-thymotide, 317
triphosphate, 261

valine, 463
Viking, 59, 625
viomycin, 391
vitamin B6, 287

xanthine, 597

Yamagata, 615
